

Preservé Breast Augmentation

Preservé™ is a new surgical technique designed to maintain more of the breast's natural anatomy while achieving beautiful, natural-looking results with less tissue disruption and an easier recovery.

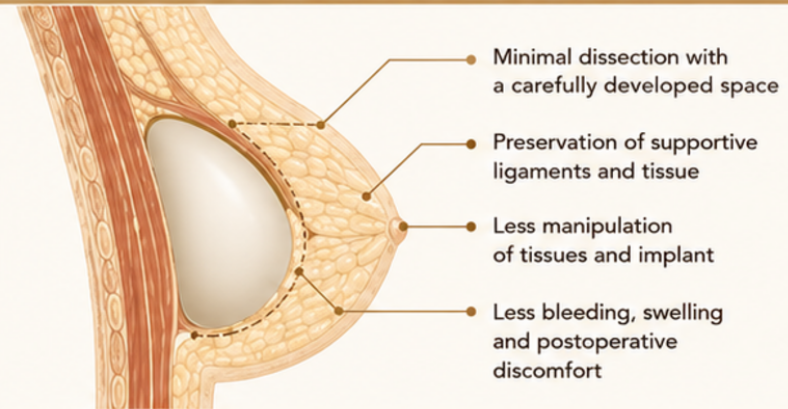

TRADITIONAL POCKET CREATION MORE TISSUE DISRUPTION

A traditional pocket is created by widely separating tissue beneath the breast or muscle to place the implant.

VS.

PRESERVÉ™ TECHNIQUE PRESERVES MORE NATURAL ANATOMY

The implant is placed using a refined technique that maintains much of the breast's natural support and internal architecture.

TRADITIONAL AUGMENTATION

- ✓ Excellent for all implant sizes
- ✓ Reliable in a wide range of anatomies
- ✓ Well established with decades of data
- ✓ Ideal for patients needing larger volume increase or who desired more dramatic results

THE BEST TECHNIQUE
DEPENDS ON YOUR
ANATOMY AND GOALS

PRESERVÉ™ ADVANTAGES

- ✓ Less tissue disruption
- ✓ Faster recovery and less postoperative discomfort
- ✓ Less bleeding, bruising and swelling
- ✓ Preserves more of the breast's natural support
- ✓ Excellent for achieving natural results

BEST FOR:

- Maintaining results that look and feel natural
- Ideal for moderate implant sizes
- Patients seeking a more subtle, natural look
- Those wanting an easier recovery and less swelling

LIMITATIONS

- May have size limitations and longer recovery
- May have more postoperative swelling and bruising
- Not ideal for very large implants or complex revisions

PRESERVÉ™ LIMITATIONS

- Not ideal for very large implants
- May have increased implant visibility in very thin patients or those with minimal native breast tissue
- Not suitable for every breast or every patient

KEY TAKEAWAY

Preservé™ breast augmentation preserves more of your biology—your support, ligaments and the natural architecture for the right patient, it can mean less trauma, faster recovery, and beautiful, natural results.
